

FORMBASE FURNITURE 2024

STAGING SYSTEMS

The Ultralight staging system is versatile and easy to use. The expanding aluminium base and lightweight staging platform are designed to be quickly and easily assembled by one person. The tubular base opens and closes in seconds and the placement of platforms is quick and simple. Although the individual components are extremely lightweight, together they form an incredibly strong staging unit, which supports a uniformly distributed load of 1000kg per square metre. Base units fold to less than 2% of their open size and stage decks have a depth of only 30mm making them easy to transport and store.

The decks and risers come in a range of heights and finishes and there is a range of accessories including a stage valance, side and back rails and a trolley. We have assembled some of the most popular configurations into handy packs or you can contact us for a bespoke staging systems quote.

1

Take your folded stage riser.

2

Fully extend the stage riser.

3

Place the stage deck on top of the riser, connecting each corner of the stage deck with the upright corner bolts on the riser.

Once the corner sections have been connected, tighten with the Allen Key through the small hole in each corner of the stage deck. Alternatively twist the stage riser tube.

4

5

Having joined your stage decks and risers together, connect each platform by tightening the locking cleats located on the leading edge of each stage deck.

6

If required, you can join two risers together for additional height and they will still fold down without having to be separated.

7

The stage decks and risers take up minimal space, making this system the ideal choice for those with limited storage.

5 Rectangular Staging

Ultralight staging system components are made up from risers and decks. The risers come in a choice of 5 heights and the decks in a choice of carpet, vinyl or heavy duty vinyl.

Our specially designed choir staging enables choirs of all sizes to perform and be seen by their audience. These infill units can be used alongside the square and rectangular units to create a curve.

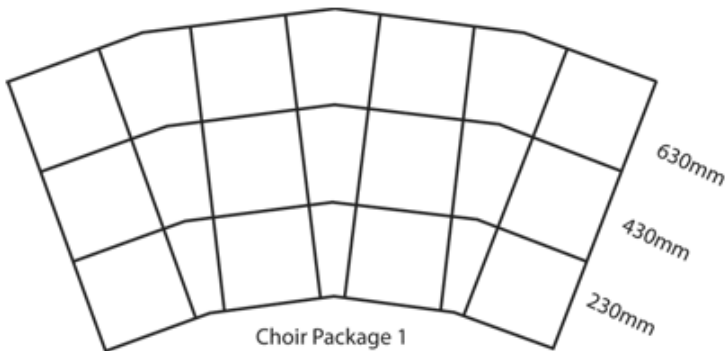

It is lightweight, folding and easy to assemble and disassemble. It can easily be transported from venue to venue and comes with a choice of carpetted, vinyl or heavy duty vinyl decks.

We have put together three packages to suit various choir configurations and hall spaces.

Optional accessories including valances, safety guardrails and chair stop plates can be found on pages 148 - 149.
